

Zorg op maat bij complexe chronische ziekten - Dataverzameling

Dr. Anke Lenferink – RE-SAMPLE klinisch coördinator
Universiteit Twente, Health Technology and Services Research
Medisch Spectrum Twente, Medical School Twente

RE-SAMPLE has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No 965315. SC1-DTH-12-2020: Use of Real-World Data to advance research on the management of complex chronic conditions. This result only reflects the author's view and the EU is not responsible for any use that may be made of the information it contains.

Dr. Anke Lenferink

- Universitair docent & klinisch epidemioloog (2017-heden)
 - UT, Health Technology and Services Research (HTSR)
 - UT, Technology in Healthcare Transformations (THT) research group
 - Medisch Spectrum Twente, Department of Pulmonary Medicine
 - Rijnstate Hospital Arnhem, Clinical Research Centre
- Zelfmanagement interventie voor patiënten met COPD en comorbiditeiten (PhD 2017)
 - UT, MST, CWZ, Flinders University
- Klinisch coördinator RE-SAMPLE (2021-heden)
 - **RE**al-time data monitoring for **S**hared, **A**daptive, **M**ulti-domain and **P**ersonalised prediction and decision making for **L**ong-term pulmonary care **E**cosystems (www.re-sample.eu)
 - UT, MST

REal-time data monitoring for Shared, Adaptive, Multi-domain and Personalised prediction and decision making for Long-term Pulmonary care Ecosystems

Factsheet:

Horizon 2020
 4 yrs (2021-2025)
 Budget €6M
 10 partners
 3 pilot sites (MST, GEM, TUK)
 Coordinated by UT

To identify individual multi-morbid CCC exacerbations and develop tailored referral to a multi-disciplinary, adaptive virtual companionship programme for patients with COPD and CCCs

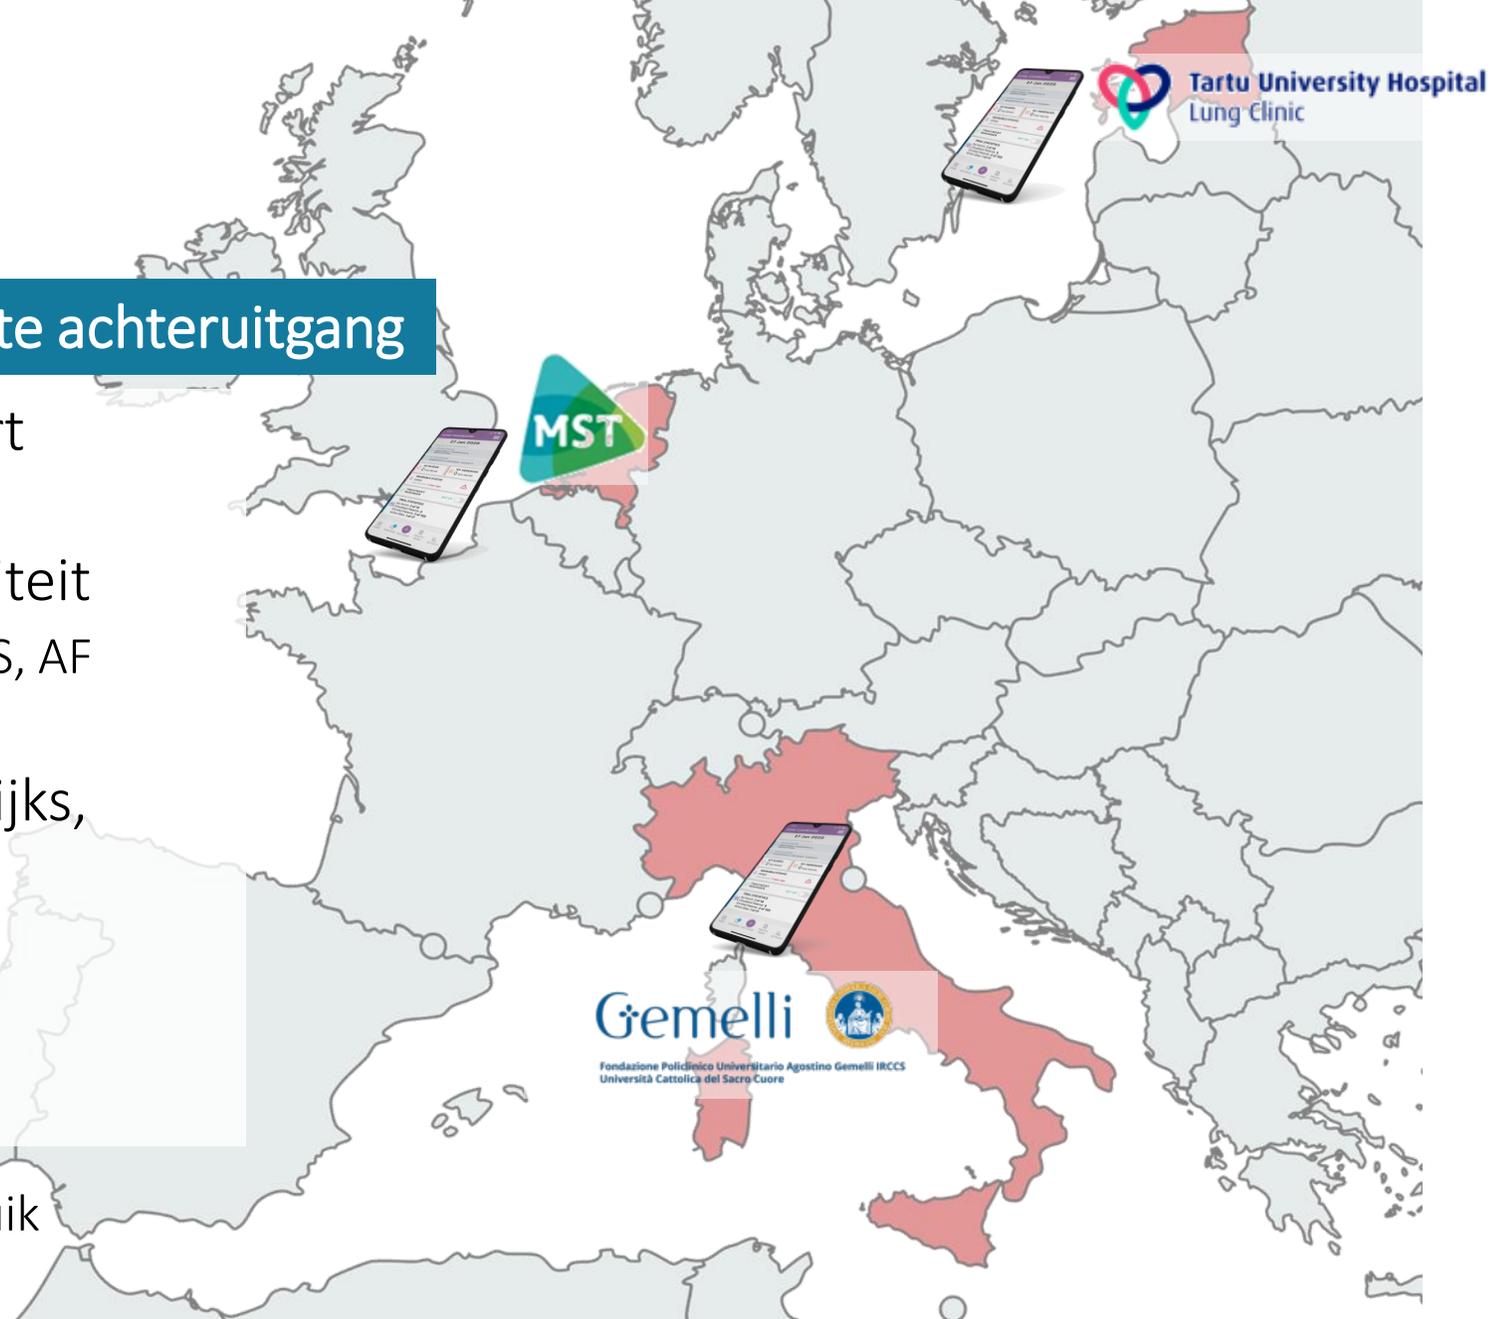

This project has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No 965315. This result reflects only the author's view and the European Commission is not responsible for any use that may be made of the information it contains.

 OF TWENTE.**

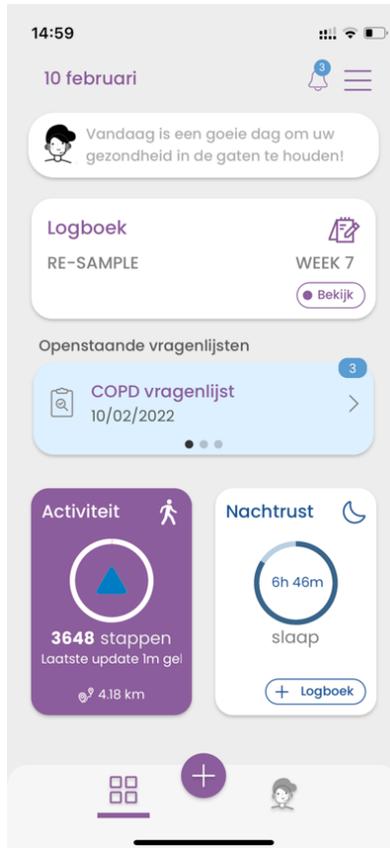

Cohort onderzoek

Doel: identificeren voorspellers ziekte achteruitgang

- Multi-center observationeel cohort
- COPD patiënten met ≥ 1 comorbiditeit
 - CHF, IHD, angst, depressie, DM, OSAS, AF
- Multi-source data: baseline, dagelijks, verslechtering, follow-up
 - RWD monitoring tool met PROMS (vragenlijsten, klachtendagboeken)
 - Fysieke activiteit (Garmin)
 - Longfunctie, 6-MWT, biomarkers
 - Ziekenhuisopnames, medicatiegebruik

RWD monitoring tool

Month:

Day: 1 2 3 4 5

↓ ↓ ↓ ↓ ↓

Did you have more symptoms than usual during the last 24 hours?
(If yes, complete the section below and check the action plan)

No

Yes

Month:		Day: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31																															
Did you have more symptoms than usual during the last 24 hours? <small>(If yes, complete the section below and check the action plan)</small>		No																															Yes
Please indicate which symptoms have changed during the last 24 hours by ticking a box for every symptom:		Day: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31																															
1	A. Sputum production	Not more than usual Slightly more than usual Significantly more than usual																															1
2	B. Sputum colour	Usual for me Different from usual																															2
3	C. Breathlessness	Not more than usual Slightly more than usual Significantly more than usual																															3
4	D. Did you have a fever (more than 38.5°C) or did you experience a significant change in coughing	No Yes																															4
5	E. Weight	Not more than usual Slightly more than usual Significantly more than usual																															5
6	F. Swelling of ankles or abdomen	Not more than usual Slightly more than usual Significantly more than usual																															6
7	G. Waking up at night short of breath	Not more than usual Slightly more than usual Significantly more than usual																															7
8	H. Felt light headed or dizzy	Not more than usual More than usual																															8
9	I. Felt depressed	Not more than usual Slightly more than usual Significantly more than usual																															9
10	J. Felt anxious	Not more than usual Slightly more than usual Significantly more than usual																															10
11	K. Did you experience a change in: pain – pressure – heaviness – tightness in one or more of your: chest – neck – jaw – arm(s) – back – shoulders OR a sudden change in your breathing resulting in severe shortness of breath OR black-outs	No Yes																															11

Lenferink et al., ERJ 2019

User requirements

GIULIA DE ROSSI

PROFILE
71 years old, located in Padua (IT), married to Antonia, COPD GOLD-II

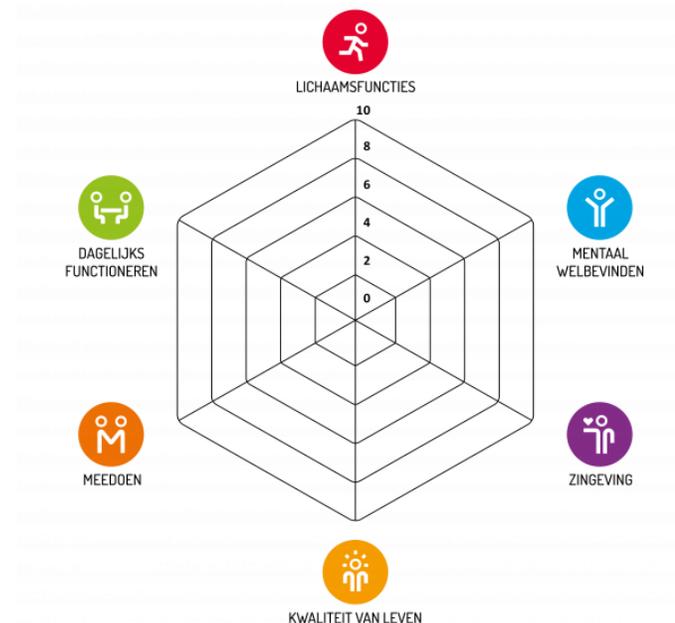

RE-SAMPLE
Activity motivation: [Progress bar]
Exercise motivation: [Progress bar]
Adaptation: [Progress bar]

PRIMARY GOAL
Continue to do grocery shopping, doing more things to see other people, spending little energy on technology as possible.

CURRENT HEALTH MANAGEMENT
Inactive in managing own health
Inactive lifestyle, afraid of engaging in physical activity
High dependency of doctor

COMORBIDITIES
Hypertension

TECHNOLOGY USE
Low interest in nowadays technologies.
Currently does not use any technology
Very reluctant towards health technology

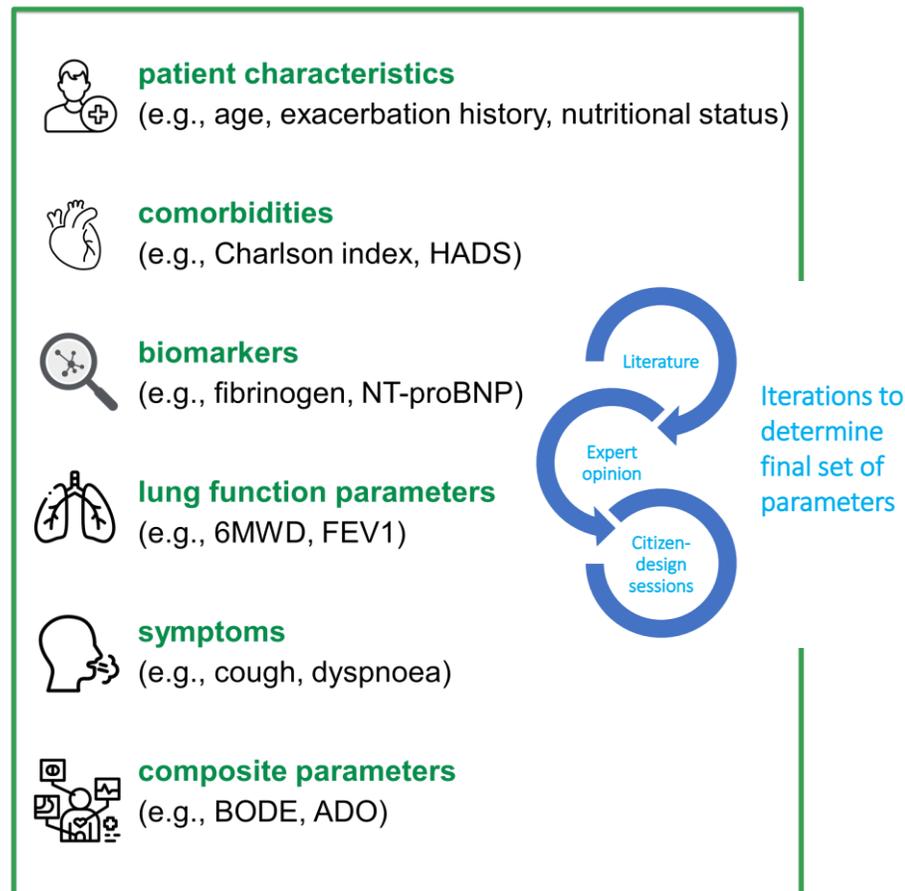

Patiëntprofielen

- Karakteristieken (leeftijd, comorbiditeiten)
- Huidige ziekte management (inactieve leefstijl)
- Persoonlijke behoeften & doelstellingen (positieve gezondheid)

Cohort iteraties dataverzameling

- **Knowledge base:** klinische richtlijnen, literatuur, retrospectieve data voorgaande studies
 - Review predictors of COPD exacerbations
 - Review markers identifying AHF in COPD patients^{1,2}
- **Multidisciplinaire iteratieve aanpak**
 - Focusgroepen met patiënten en zorgprofessionals
 - Wie zijn onze eindgebruikers?
 - Wat zijn de behoeften?
 - Welke parameters en hoe gemeten?
 - 3 iteraties om dataverzameling te optimaliseren

1. Van Dijk et al. Lack of evidence regarding markers identifying acute heart failure in patients with COPD: an AI-supported systematic review. *Int J COPD* 2024
2. Van Dijk et al. Artificial Intelligence in systematic reviews: promising when appropriately used. *BMJ Open* 2023

Zorg op maat bij complexe chronische ziekten – Data delen

Dr. Anke Lenferink – RE-SAMPLE Klinisch coördinator
Universiteit Twente, Health Technology and Services Research
Medisch Spectrum Twente, Medical School Twente

RE-SAMPLE has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No 965315. SC1-DTH-12-2020: Use of Real-World Data to advance research on the management of complex chronic conditions. This result only reflects the author's view and the EU is not responsible for any use that may be made of the information it contains.

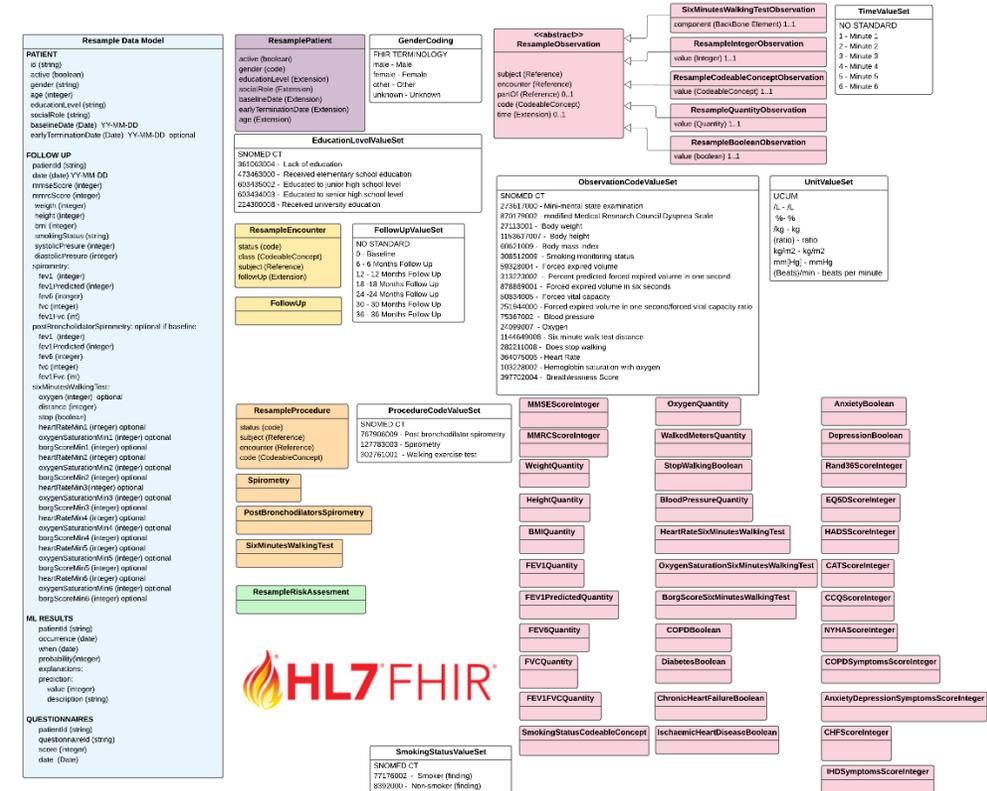

RE-SAMPLE DATA & DATA FORMAT

• Retrospectieve datasets

- Eerder verzameld in 3 ziekenhuizen
- Ziekenhuisdata & vragenlijsten
- Overeenstemming data formats

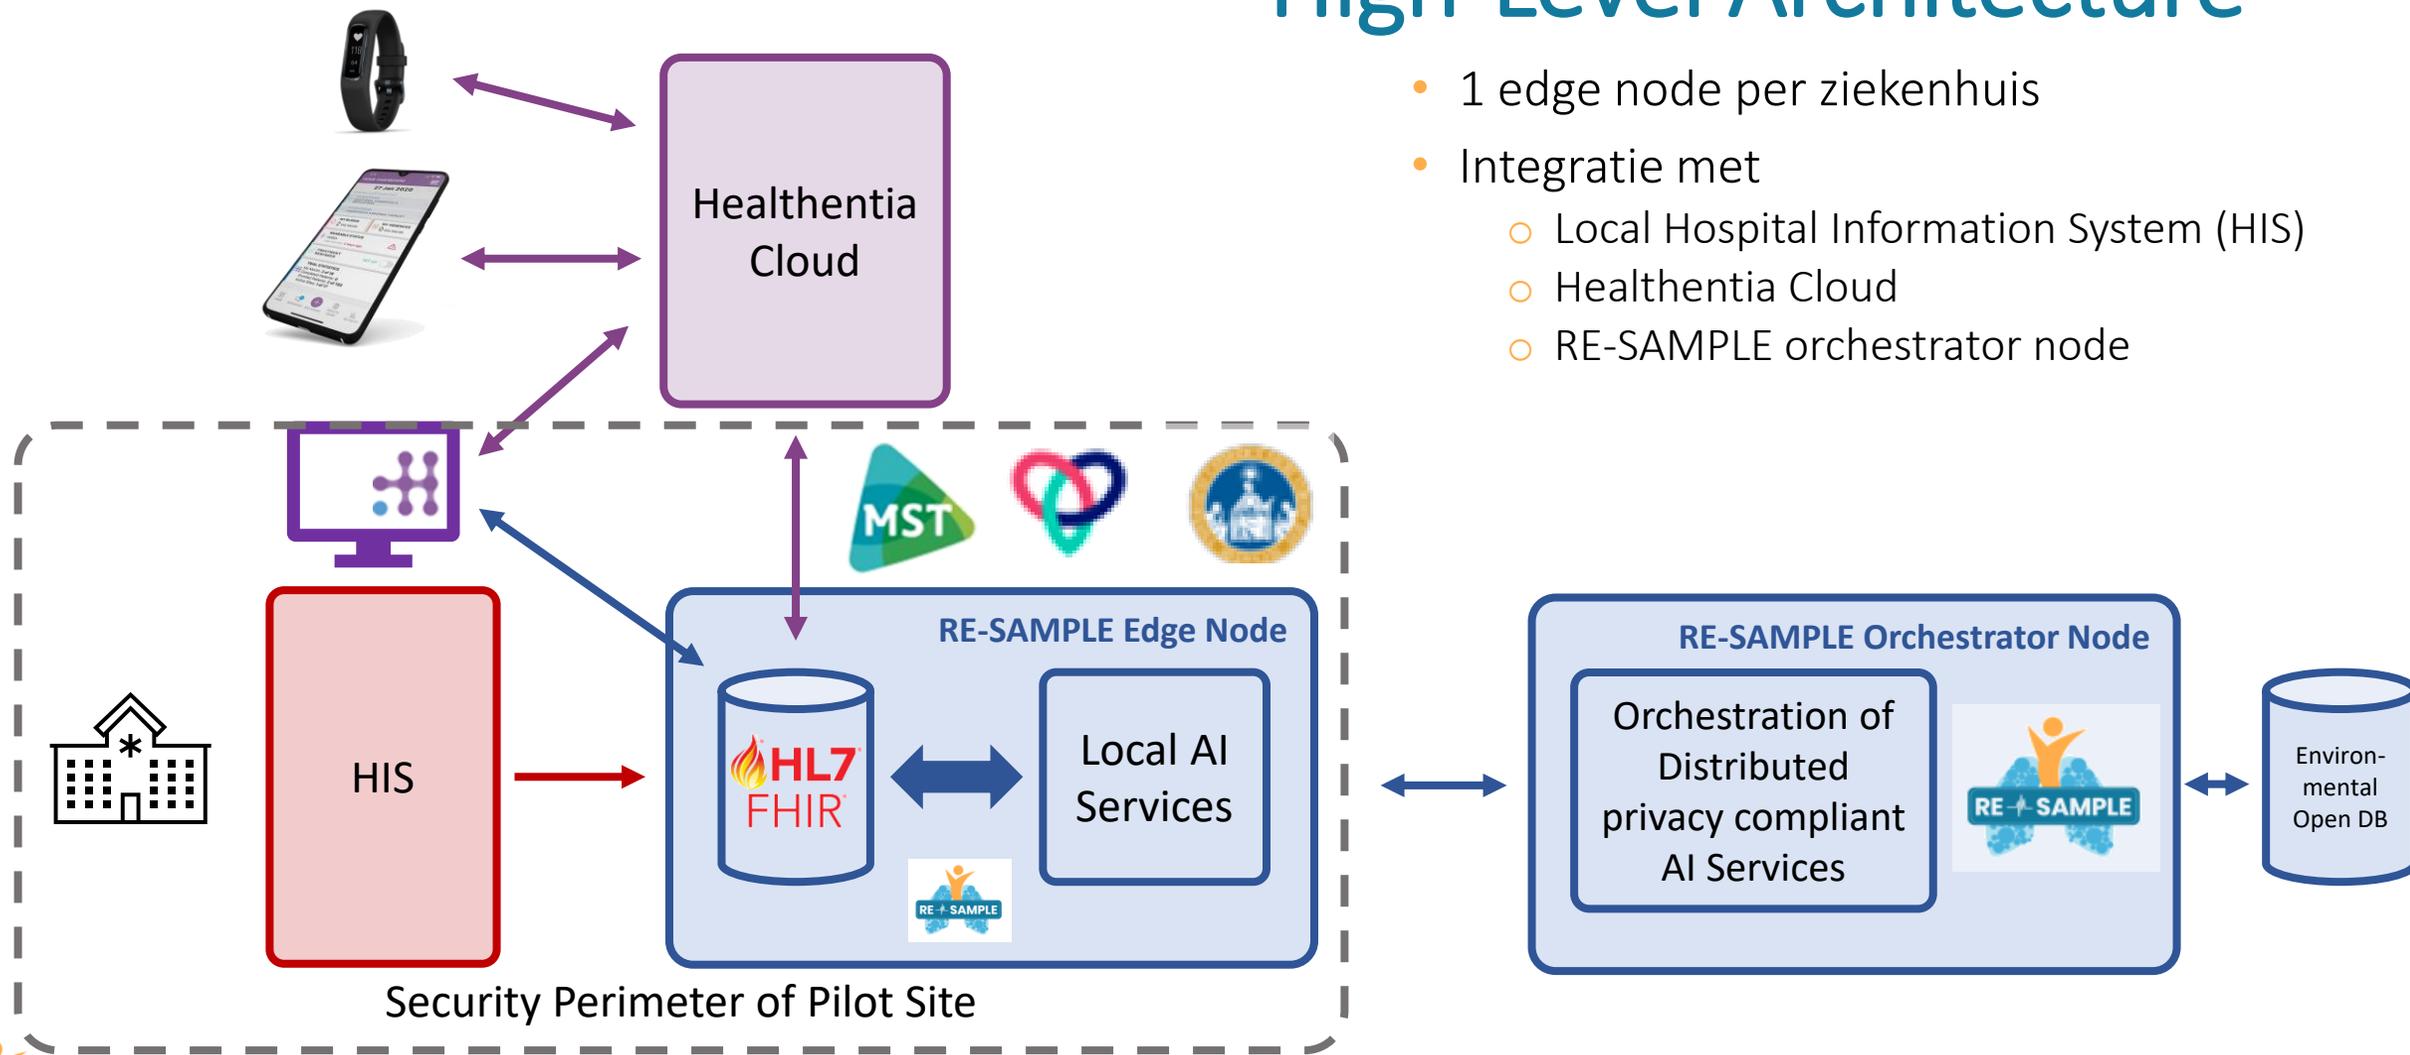

• Prospectieve datasets

- Verzameld tijdens RE-SAMPLE cohort onderzoek
- Ziekenhuisdata & patiëntenapplicatie (RWD tool)
- Aggregatie in edge nodes (per ziekenhuis)
- Uniform data format

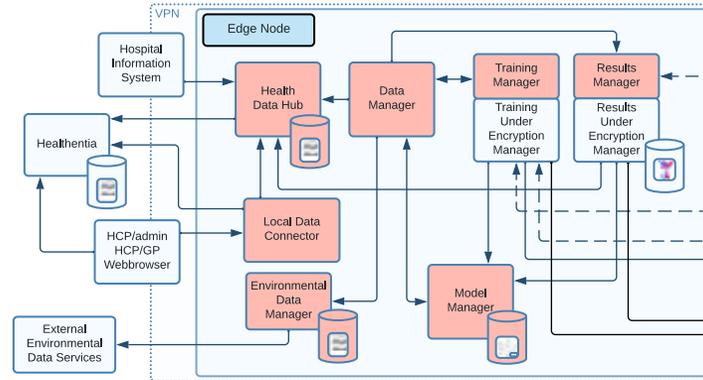

High-Level Architecture

- 1 edge node per ziekenhuis
- Integratie met
 - Local Hospital Information System (HIS)
 - Healthentia Cloud
 - RE-SAMPLE orchestrator node

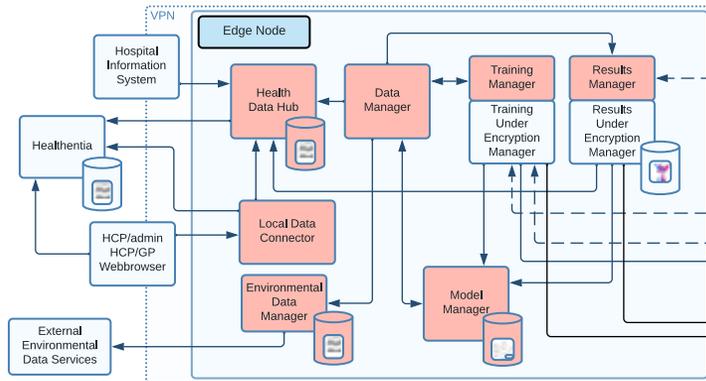

Edge nodes

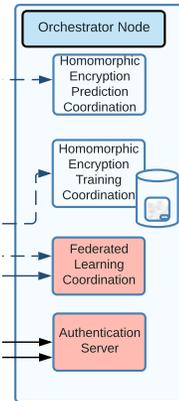

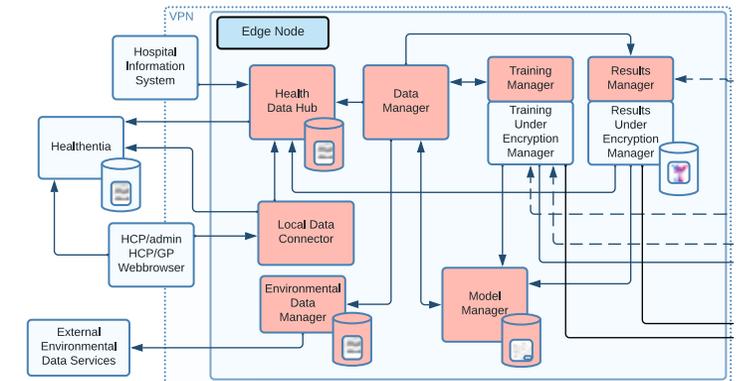

Enschede, NL

Rome, IT

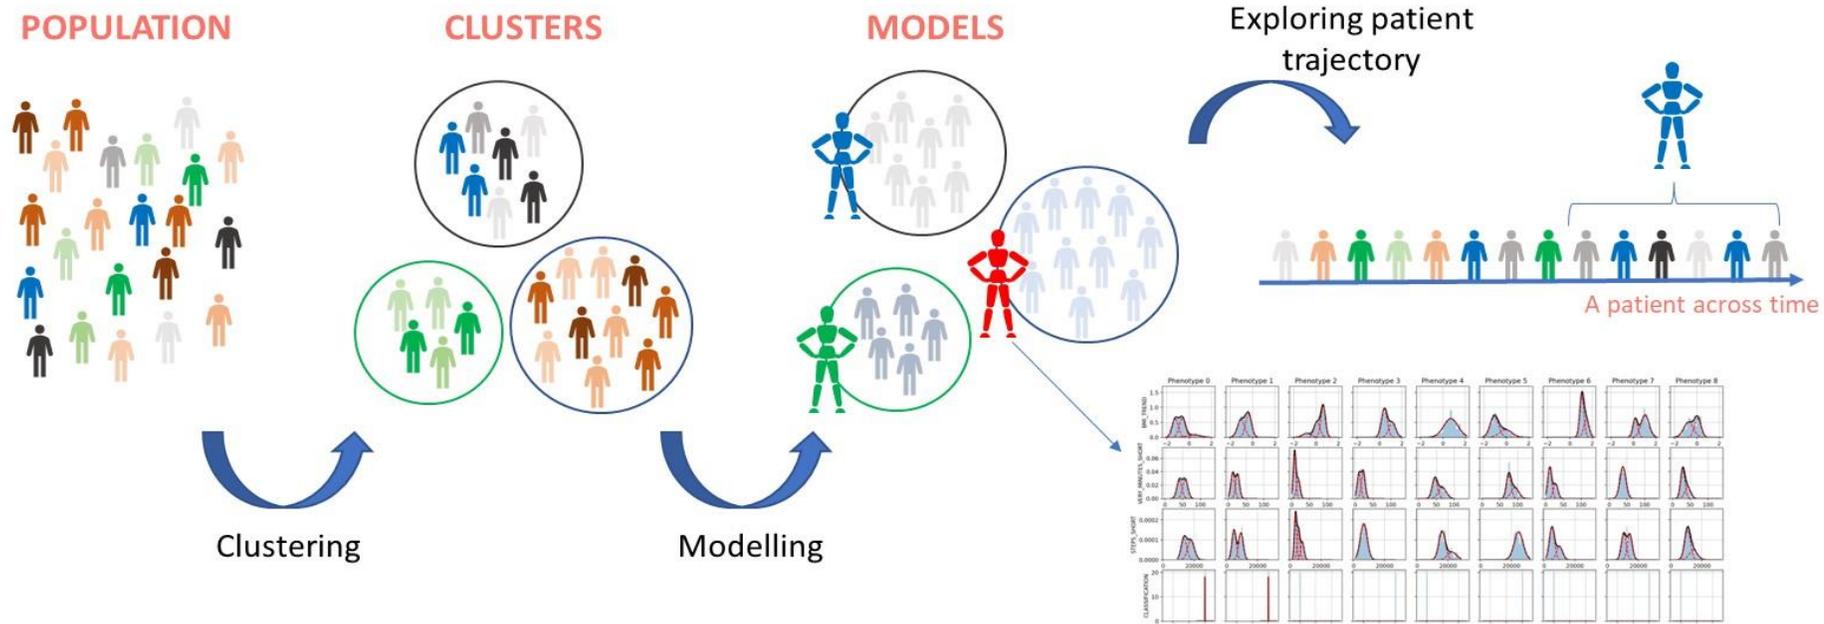

Tartu, Estonia

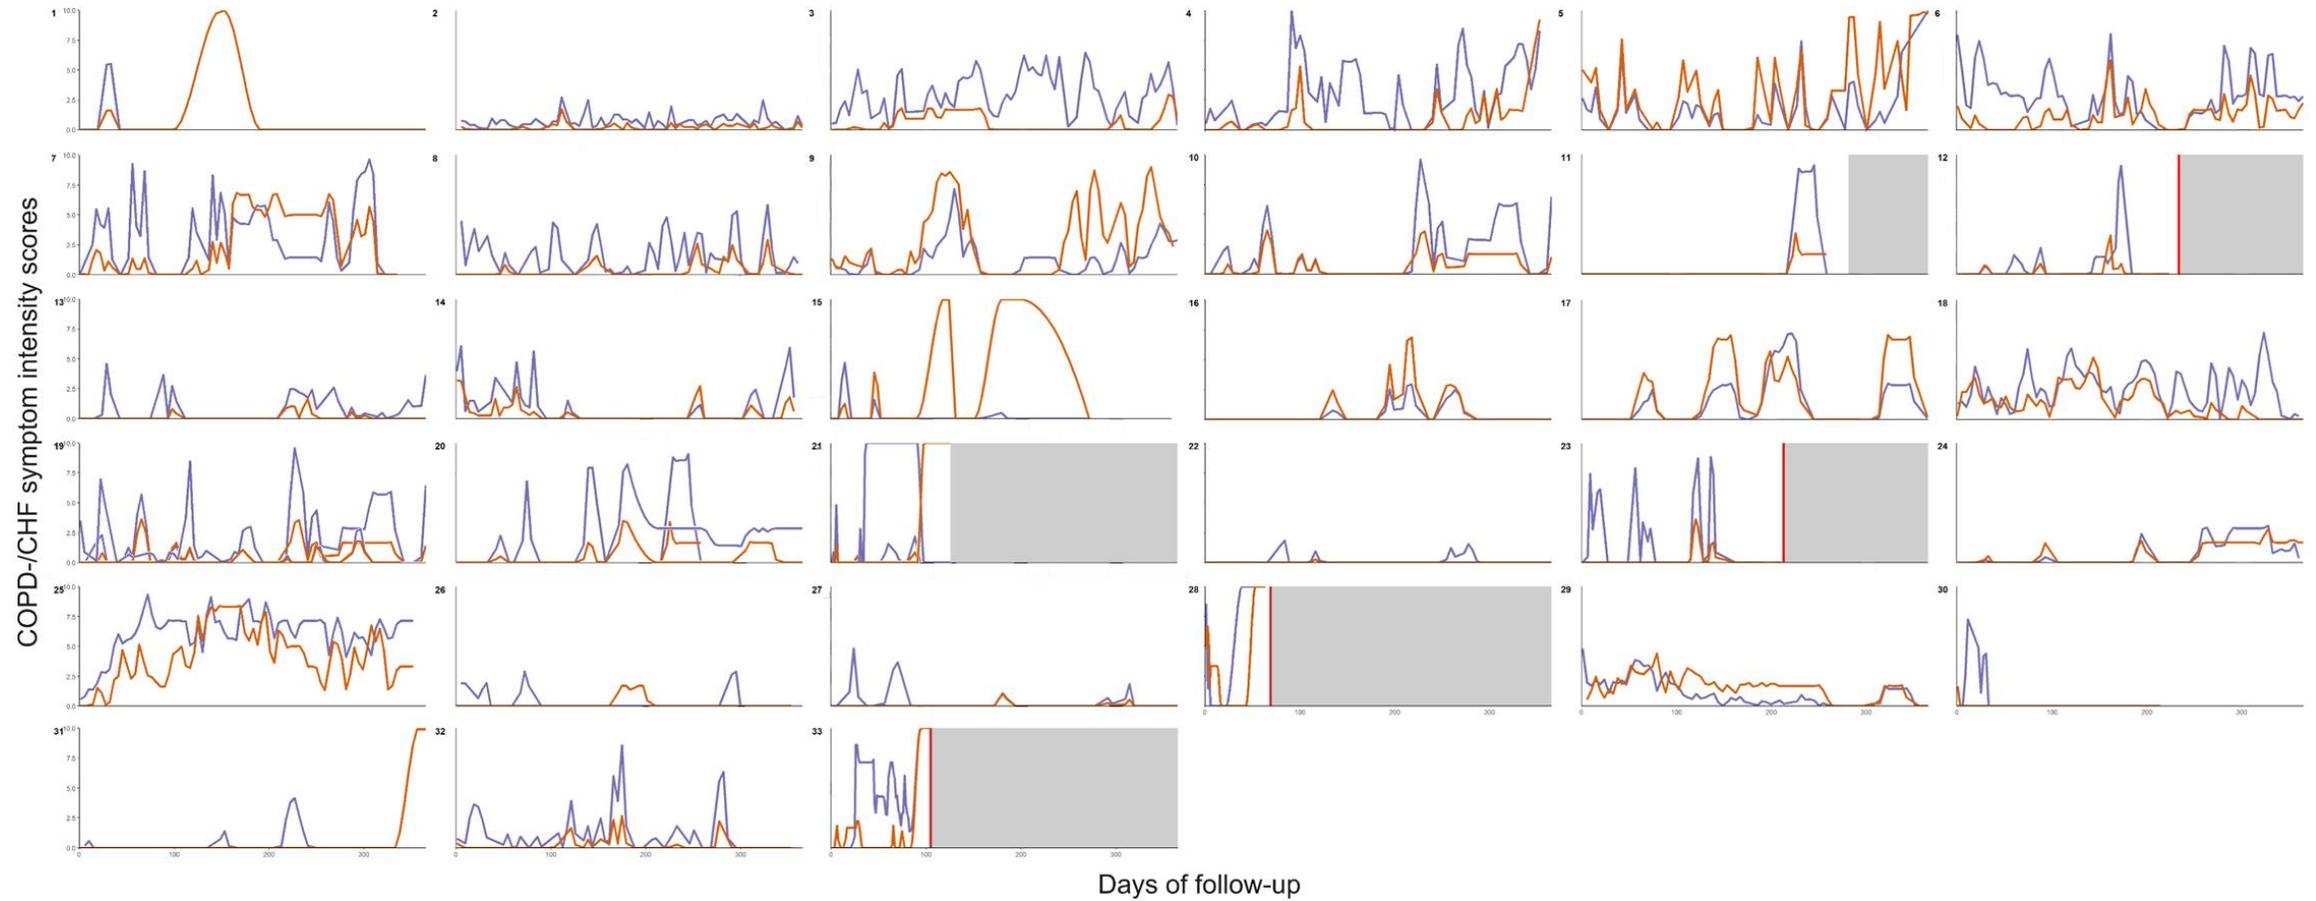

Datagedreven zorg op maat

- Specificaties zelfmanagement interventie
 - Kans op een bepaalde uitkomst (exacerbatie/overlijden) tijdens follow-up
 - Ziekte-specifieke richtlijnen voor behandeling
 - Componenten zelfmanagement interventie
 - Gelinkt aan patiëntenprofielen

Patronen van exacerbaties

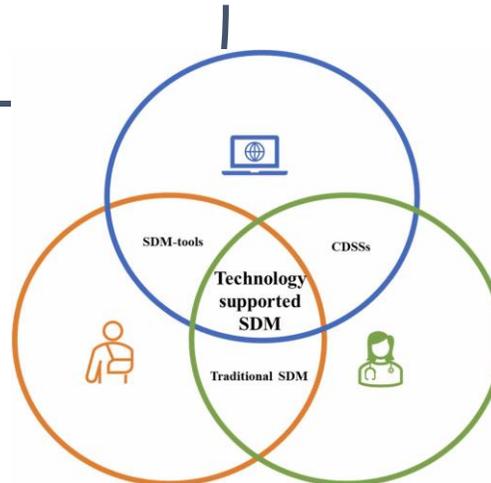

van Dijk et al. Exploring patterns of COPD exacerbations and comorbid flare-ups. *Int J COPD* 2024

Personalised coaching

Shared Decision Making

Virtueel coachingsprogramma

- Virtual companion and clinical dashboard: tailored care and support for CCCs
 - Self-management intervention sessions
 - Education about COPD and other CCCs
 - Recognition and self-treatment symptoms (including multi-morbid action plans)
 - Smoking cessation
 - Breathing and relaxation exercises
 - Shared decision making and personalised coaching
 - Individual goal setting based on pre-set goals
 - Tailored coaching dialogues
 - Goal setting evaluation
 - Risk profile
 - Case-manager support

Zorg op maat bij complexe chronische ziekten

Multidisciplinaire aanpak

- Collectieve kennisbaak: literatuur, retrospectieve data, klinische richtlijnen
- Continue betrokkenheid van eindgebruikers

Belangrijke resultaten

- ✓ Iteraties voor optimale RWD verzameling
- ✓ Architectuur voor data-uitwisseling meerdere bronnen (edge nodes)
- ✓ Multi-morbide zelfmanagement ondersteuning (app en dashboard)
- ✓ Persoonlijke coaching strategieën (app en klinisch dashboard)

Work in progress

- Vertalen bevindingen naar verdere ontwikkeling proactief ziektemanagement
 - Wat werkt voor wie (bereidheid/klaar om te veranderen, (digitale) gezondheidsvaardigheden)?
 - Wanneer welke interventie en hoe aanbieden?
- Integratie en evaluatie virtueel coachingsprogramma

Dank voor uw aandacht!

Anke Lenferink, a.lenferink@utwente.nl
